

Hill's “Pet Nutrition” and “Customer Development” Module Updates

Instructions

To use the SCORM2CMS adapter, you must point the iframe in the parent setup to the wrapper.html in the module package. All SCORM activities will be broadcast using the postMessage API, as discussed.

I updated the [SCORM2CMS repo](#) to allow fetching the URL to the desired module as the first step.

Changes in the sequence:

1. Dynamic Module URL Fetch:

- The **Parent** first queries the **Database** to fetch the URL for the desired SCORM module.
- Once the URL is retrieved, the **Parent** dynamically loads the **Wrapper** in the iframe.

2. Loading the Wrapper:

- After fetching the module URL, the **Wrapper** is loaded into the iframe.

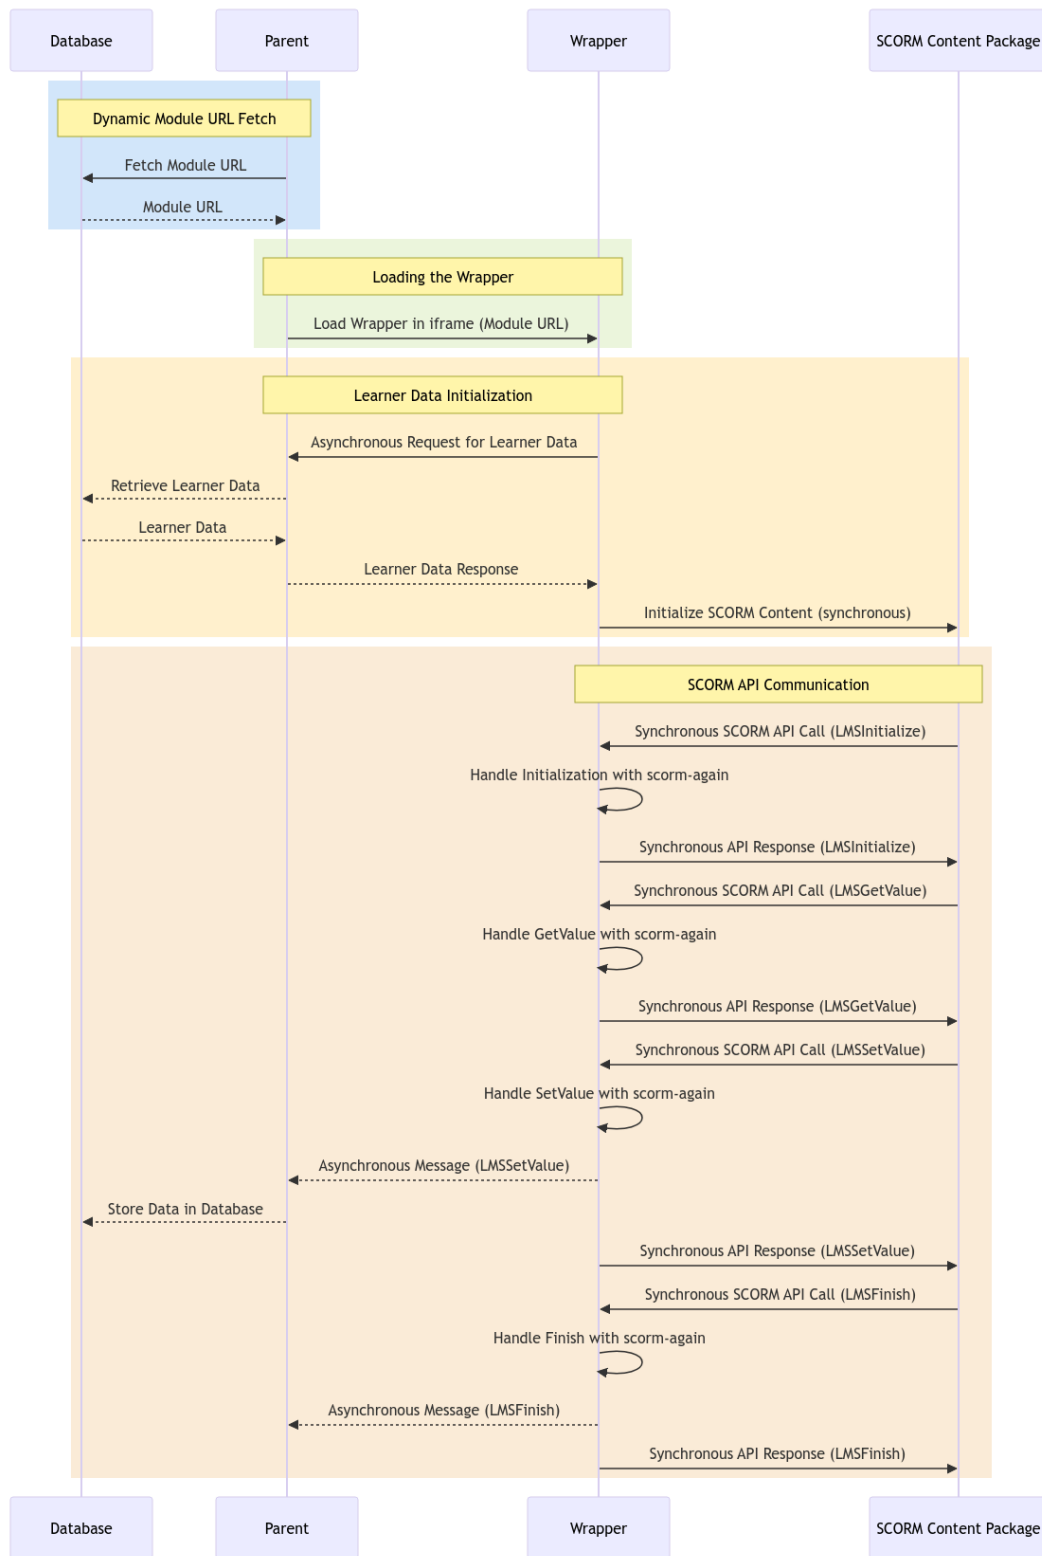

3. Rest of the Flow:

- The process for learner data initialization, SCORM API calls, and database storage remains unchanged.

Key Benefits of the Updated System:

- **Dynamic Module Loading:** The **Parent** can dynamically determine which SCORM module to load, allowing for greater flexibility and reusability of the system.
- **Separation of Concerns:** The responsibility for selecting the module and managing the database operations remains with the **Parent**, while the **Wrapper** handles SCORM-specific tasks.
